Light, atmosphere, individuality – more room for personality

Herrieden, 19 September 2026

You feel at home where you can truly be yourself. Light, colours and patterns create an atmosphere that is tailored to the individual. Light not only affects how we perceive our surroundings but also how we feel. The innovative lighting system LumiQ gives light in the kitchen a whole new meaning – thanks to its holistic design and intuitive controls, it makes the perfect companion.

Warm and welcoming: LumiQ creates a homely atmosphere at the push of a button. Photo: Schüller

LumiQ is revolutionising the kitchen sector, and at Schüller it is now setting new standards in lighting scenarios, technology and kitchen planning with lighting. **Interior lighting** inside pull-outs and workspace lighting under top units or in the panel system are further highlights, as is the newly designed Frame Rack lighting, the ceiling floodlight and other **living elements**. This makes creating a consistent lighting concept for the kitchen and living area easier than ever.

Light you can feel

With LumiQ, a sophisticated sensor ensures that pull-outs and cupboard doors are automatically illuminated when opened, while intelligent lighting optics direct light precisely where it is needed – onto workspaces and into pull-out interiors. What's more, LumiQ demonstrates its innovative strength in two unique solutions: grip ledge lighting for dishwasher fronts, which stays on when the appliance is opened, and continuous vertical grip ledge lighting next to tall built-in appliances. All LumiQ elements are **continuously dimmable**, can be colour-adjusted from **warm to neutral white** and can be controlled via individually programmed **light sequences**. The lighting system can be easily operated by app, remote control or wall switch and integrated into an existing smart-home system if required. Ambitious technology teamed with intuitive controls.

Your finished lighting plan in just two clicks and under a minute

If the kitchen has already been planned, all that's missing is the right lighting. The **LumiQ lighting planner** lets kitchen planners choose from our **three packages – Good, Better and Best** – in just two clicks and less than a minute. These predefined packages are made up of different lighting components and provide a structured proposal for customised planning. Furthermore, a bespoke lighting package can also be put together using the **Custom option**, enabling retailers to respond flexibly to customer requirements. The LumiQ lighting planner is already integrated into the planning programmes CARAT, eOPUS, KPS.MAX and Winner Flex,

so that lighting planning can be seamlessly integrated into the usual workflow.

A newly devised **LumiQ brochure** will also help retailers get to grips with the new lighting system. In addition, new installation videos in multiple languages provide practical guidance on how LumiQ components work and are installed – ideal for retail partners and fitters.

Design with personality
LumiQ allows Schüller to skilfully showcase rooms and shift the focus to what really matters. New colours, bold recess motifs and other new design features in the 2027 Schüller collection provide more options for customising individual living spaces – always showing them in the perfect light.

Four new lacquer colours expand the **Colour Concept** range to a total of 29 colours, including 13 colours for carcase exteriors and 4 for carcase interiors. The modest **almond beige** decor is a low-key front colour that can be flexibly combined with different materials and shades. **Caramel** is an earthy shade, while **mocha** oozes an appealing warmth. Elegant **night green** rounds off the selection of new lacquer shades.

Feel-good colour combinations: the new shades almond beige and caramel. Photo: Schüller

Three new colours – **mother-of-pearl matt, terracotta matt and champagne matt** – are also available in the **smart glass** range for customised designs. The high-quality polymer glass surface interacts beautifully with the light and together with LumiQ creates a special atmospheric effect.

Almond beige has also been adopted as a new **system colour** for carcases and grip ledges. As well as matt velvet and satin lacquer fronts, the shade is now also available for the Nova, Matera, Salona and Sora ranges. This makes consistent planning in modern colours possible even where different fronts are used.

Last year, curved elements were one of the new highlights, and this year, Schüller has expanded the range. The selection of **elegant curved support panels** has been complemented by two wood decors in the form of the new surface Toscana walnut relief pore effect and sand oak relief pore effect, which was also introduced last year. Available for base units and tall units, these support panel elements give the kitchen an organic feel, which is enhanced by their natural wood look. With thoughtful planning in mind, both colour schemes are also available for fronts.

Creative **recess decors** give the kitchen character. From deliberate contrasts to matching fronts and worktops, an attractive recess design adds depth to the room and creates an atmosphere. As part of the 2027 collection, the range of recess motifs has been extensively revised and expanded with striking decors. 3D print motifs that are pleasant to the touch, monochrome or multicolour slim brick tiles and colour gradients on glass are just a few of the new recess design highlights at Schüller.

Slim brick tiles in the 3D print motif – recess design with a flair for fun. Photo: Schüller

Individual personalities come to the fore at home and especially in the kitchen – the heart of everyday life. An extensive range of colours, decors and design elements creates the perfect foundations for individually tailored living spaces. New lacquer colours for the Colour Concept range, bold recess motifs and other elegant innovations allow Schüller to provide more options for bespoke kitchen designs.

The brand

Schüller is an international quality brand – made in Germany. The brand offers comprehensive interior design solutions, with kitchens as the starting point. With a diverse range and a focus on high quality at excellent value for money, Schüller caters to the broad mid-market segment. The goal is to create kitchens that bring joy and make home life noticeably easier and more fulfilling.

The company

Schüller Möbelwerk GmbH is a leading international kitchen furniture manufacturer. Founded in 1966, this family-run business produces around 170,000 bespoke kitchens every year. Schüller has stayed true to its production site in Germany since the beginning. It boasts exceptionally high vertical integration, great flexibility and efficient processes. Through the quality brand Schüller, the company designs kitchens for life for the broad mid-market segment, while next125 stands for timelessly elegant design in the premium range. Systemo complements the portfolio with top-quality worktops. The approximately 2,300 employees of Schüller Möbelwerk GmbH embody reliability, quality and close collaboration, upholding these values across around 40 countries worldwide. Markus Schüller, Max Heller and Manfred Niederauer have been running the family business, now in its second generation, since 2003.
